Technology Stack (Architecture & Stack)

Date	31 January 2026
Team ID	Not provided — confirm with MySkillWallet/college
Project Name	EV Market Intelligence Dashboard
Maximum Marks	2 Marks

Technology Stack

The current implementation uses Tableau Public with a supplied CSV dataset. No separate Python, SQL database, or web application is claimed as implemented.

S.No	Component	Description	Technology	Justification / Purpose
1	Programming / Query Language	Language used to query, filter, transform, aggregate, and analyze data.	No separate programming language required; Tableau drag-and-drop interface and built-in calculations.	The project is implemented in Tableau Public. Basic calculated fields may be used only if needed; Python/SQL are not claimed as implemented.
2	Database / Data Warehouse	Store and manage structured data for analysis and reporting.	CSV dataset supplied through MySkillWallet; local file used as Tableau data source.	A CSV file is sufficient for the supplied project dataset and avoids setting up an unnecessary database for a student dashboard.
3	Data Ingestion	Load data from source files into the analytical environment.	Tableau Public file upload / CSV data connection.	Connects directly to the supplied dataset and makes its fields available for worksheets.
4	Data Transformation and Business Logic	Clean, filter, aggregate data and calculate metrics.	Tableau Public data pane, field roles, aggregations, sorting, filters, and built-in calculations where required.	Supports sales aggregation, top-10 ranking, average customer rating, and comparisons without a separate ETL pipeline.
5	Data Visualization / Analytics	Create interactive dashboards, charts, reports, KPIs, and visual analysis.	Tableau Public worksheets and dashboard editor.	Provides the nine visualizations required by the project and allows online publication and sharing.
6	Front-End / User Interface	Interface through which users interact with dashboards and visual insights.	Published Tableau Public dashboard in a web browser.	Users can open the shared URL, inspect marks/tooltips, and use any filters/highlighting configured in the dashboard.
