Maximum Marks	2 Marks

Customer Journey Map

Dashboard user experience across three stages. This is a scenario-based design hypothesis, not a result of actual user interviews.

Journey Phase	Stage 1: Access & Understand	Stage 2: Explore & Compare	Stage 3: Decide & Share
Actions	Open the Tableau Public dashboard; review the title and available charts.	Compare sales by category/manufacturer, battery mix, range, ratings, country, model year and CO■ savings.	Use findings to identify segments for further investigation; share dashboard link and conclusions.
Touchpoints	Published Tableau Public URL; dashboard title and chart layout.	Nine worksheets, legends, sorting, filters/highlighting where configured, and tooltips.	Published link, exported workbook, project documentation and presentation video.
Customer Thought	What does this dashboard cover, and which measures are available?	Which categories/manufacturers lead? Which battery types and vehicle segments stand out?	What evidence supports a recommendation, and what are the dataset's limitations?
Customer Feeling	Curious, but may be uncertain if the dashboard layout is crowded.	More confident when comparisons are readable; frustrated if labels overlap or charts require too much scrolling.	Confident if values, units, and assumptions are clear; cautious if the dataset does not support causal claims.
Process Ownership	Project owner: Divyanshu Choudhary; dashboard viewer evaluates clarity.	Project owner maintains worksheet definitions, chart titles, filters and tooltip consistency.	Project owner verifies published link, workbook file, documentation and video before submission.
Opportunities	Add a concise dashboard title, clear section headings, and consistent sizing.	Use top-10 manufacturer filtering, readable category labels, useful tooltips, and avoid overcrowding.	State dataset scope and limitations; include key takeaways and ensure the public link and workbook are accessible.
