Project Proposal (Proposed Solution)

Date	29 October 2026
Team ID	Not provided — confirm with MySkillWallet/college
Project Name	EV Market Intelligence Dashboard
Maximum Marks	3 Marks

Project Overview

Project Overview	EV Market Intelligence Dashboard
Objective	Create a Tableau Public dashboard with nine visualizations that help users compare EV sales, manufacturers, battery technology, range, customer satisfaction, manufacturing geography, model-year trends, battery capacity, and estimated CO■ savings.
Scope	In scope: use the supplied CSV dataset, validate field roles and aggregations, build nine Tableau views, assemble/publish a dashboard, and prepare project documentation and a walkthrough video. Out of scope: live data feeds, predictive modelling, causal claims, and production database integration.
Problem Statement	EV market information in a dataset can be difficult to interpret when sales, battery specifications, range, ratings, geography, and sustainability measures are examined separately. Stakeholders need a consolidated visual view to compare segments efficiently.
Description	The project uses the supplied EV market dataset and Tableau Public to present related measures through nine visualizations and a single dashboard. Users can inspect comparisons and available tooltips/filters.
Impact	The dashboard can reduce manual comparison effort, make leading categories and patterns easier to spot, and support evidence-based discussion. The impact depends on dataset coverage, field quality, and correct interpretation.
Proposed Solution	A browser-accessible Tableau Public dashboard backed by the provided CSV dataset.
Approach	Inspect the dataset and field types; define measures and dimensions; build and verify nine worksheets; arrange them in a readable dashboard; publish to Tableau Public; test the public link; document assumptions and explain the visuals in a screen-recorded presentation.
Key Features	Nine linked views; category and manufacturer sales comparisons; battery technology mix; driving-range comparison; country map; customer satisfaction; model-year sales trend; capacity-versus-range scatter plot; estimated CO■ savings comparison; tooltips and configured interactions.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware	Hardware	Existing personal laptop; no dedicated GPU required.
Computing Resources	CPU/GPU specifications, number of cores	Laptop capable of running a modern browser and Tableau Public web authoring; exact CPU/core specification not provided.
Memory	RAM specifications	Use available laptop memory; exact RAM capacity not provided. Close unnecessary browser tabs if Tableau becomes slow.
Storage	Disk space for data, models, and logs	Local space for the CSV dataset, workbook (.twb/.twbx), completed templates, PDFs, and video; exact file sizes depend on exports.
Software	Software	Tableau Public, a modern web browser, word processor/PDF export tool, and GitHub for project repository.
Frameworks	Python frameworks	No separate Python framework is required or claimed for this Tableau-only dashboard.
Libraries	Additional libraries	No external Python libraries required; Tableau's built-in visualization, aggregation, and filtering capabilities are used.

Resource Type	Description	Specification/Allocation
Development Environment	IDE, version control	Tableau Public in a browser; documents edited in a word processor; GitHub repository used to organize and share deliverables.
Data	Data	Supplied EV market CSV dataset downloaded from the MySkillWallet project workspace.
Data	Source, size, format	EV market dataset supplied for the capstone; CSV format. Exact row count/file size should be copied from the downloaded dataset if the template requires it.
