Solution Architecture

Date	29 October 2026
Team ID	Not provided — confirm with MySkillWallet/college
Project Name	EV Market Intelligence Dashboard
Maximum Marks	4 Marks

Logical Architecture Flow

1. Data source: supplied EV market CSV → 2. Connection and field validation in Tableau Public → 3. Analysis through dimensions, measures, aggregations and nine worksheets → 4. Dashboard layout, legends, tooltips and configured interactions → 5. Publish and share the Tableau Public URL, workbook and documentation.

Component Description Table

Component Name	Description / Role in Architecture	Technology Used
Data Source	Holds the supplied EV market data, including category, manufacturer, country, battery type, model year, sales, capacity, range, rating, and CO■ savings fields.	CSV file
Data Ingestion / Connection	Loads the CSV into the visualization environment and exposes its fields to worksheets.	Tableau Public data connection
Data Preparation / Business Logic	Checks data types, dimensions, measures, aggregations, sorting and any required filters/calculations. Data cleaning is limited to what is actually performed in the workbook.	Tableau Public data pane, built-in aggregation and filters
Analytics / Worksheet Layer	Builds nine individual views for sales, manufacturers, battery mix, range, country, satisfaction, model-year trend, capacity-versus-range, and sustainability.	Tableau Public worksheets
Dashboard / Presentation Layer	Combines worksheets into one dashboard and configures size, placement, titles, legends, tooltips and available interactions.	Tableau Public dashboard editor
Publication / User Access	Publishes the workbook online and provides a shareable URL. A local workbook copy and documentation are retained for submission.	Tableau Public, web browser, local .twb/.twbx file

Design Boundary

This is a student-scale, CSV-backed BI dashboard. It does not include a live ingestion pipeline, enterprise database, authentication layer, scheduled refresh service, or predictive model.
