Problem–Solution Fit Canvas

Date	29 October 2026
Team ID	Not provided — confirm with MySkillWallet/college
Project Name	EV Market Intelligence Dashboard
Maximum Marks	2 Marks

Purpose / Vision

Help EV market stakeholders compare sales, technology, customer experience, driving range, and estimated sustainability indicators in one accessible dashboard.

Completed Canvas

Canvas Element	EV Market Intelligence Dashboard — Project-specific answer
1. Customer Segment(s)	EV market analysts, manufacturer strategy teams, and sustainability researchers who need a consolidated view of vehicle sales, battery technology, range, customer ratings, manufacturing geography, and estimated CO■ savings.
2. Jobs-to-be-done / Problems	Compare EV categories and manufacturers; identify leading sales segments; understand battery technology mix; compare driving range and customer satisfaction; inspect battery capacity versus range; evaluate estimated sustainability impact.
3. Triggers	Market planning and product-positioning reviews; questions about which categories or manufacturers lead; interest in battery/range trade-offs; sustainability reporting or portfolio comparison.
4. Emotions: Before / After	Before: uncertainty, fragmented information, and time spent switching between charts or spreadsheets. After: clearer comparisons and more confidence in deciding which segments deserve further investigation—provided the data and chart definitions are understood.
5. Available Solutions	Spreadsheets, separate reports, manufacturer websites, market research reports, and individual charts. These may be useful but can be fragmented, time-consuming to compare, or inconsistent in presentation.
6. Customer Constraints	The dashboard uses the supplied dataset only; it may not represent the entire market or current live sales. Data quality, missing fields, aggregation choices, browser screen size, and limited time can constrain interpretation.
7. Behaviour	Users sort categories/manufacturers, compare bars and trends, inspect map marks, review scatter-plot patterns, and use tooltips or available filters to investigate interesting segments.
8. Channels of Behaviour — Online	Published Tableau Public dashboard URL, browser-based charts, tooltips, legends, and configured filters/highlighting. The dashboard can be shared as a link.
8.2 Channels of Behaviour — Offline	Project presentation, screen-recorded walkthrough, classroom/project review, and discussion of findings using the dashboard and documentation.
9. Problem Root Cause	Relevant measures are spread across multiple fields and comparisons are difficult when viewed independently. Users need a consistent visual overview; the dataset itself may still contain limitations and does not establish causation.
10. Your Solution	A Tableau Public dashboard containing nine views: sales by category; top 10 manufacturers; battery technology mix; driving range by category; manufacturing-country map; customer satisfaction; sales by model year; battery capacity versus range; and CO■ savings by category. The dashboard supports visual comparison and exploration, not live forecasting.

Validation note: These customer needs and behaviours are project hypotheses derived from the dashboard scope, not findings from completed customer interviews.
