By using stories in Tableau, you can effectively communicate complex data in a way that is both interactive and engaging, making it easier for the audience to follow along and understand the insights. It's a tool for **data storytelling**, allowing you to present insights in a cohesive, engaging way that takes viewers through a logical progression of findings or analyses.

In Tableau, **Story** is a feature that allows you to create a sequence of dashboards, visualizations, and text to present data insights in a cohesive and narrative-driven way. It's like a slideshow within Tableau that guides the audience through a series of data points, helping them understand key insights, trends, or outcomes of your analysis.

Observations:

- **Technology Category Leads in Profit**: The Technology category is generating the highest profit among all categories.
- **Seasonal Sales Trend**: Sales peak in November, while February sees the lowest sales, indicating a possible seasonal trend.
- **Consumer Segment Dominates**: The Consumer segment contributes to the highest percentage of sales, accounting for 50.56%.

- **Top Revenue-Generating Product**: Chairs from the Furniture category generate the highest revenue, totaling 1.66M.

### Activity 2:

Publish Story on Tableau Public and Paste Public link below

# EV Market Intelligence Dashboard — Story

Story purpose: move from market volume to technology choice, vehicle capability, customer feedback, and reported sustainability. Use the nine Tableau views as story points or place them into a sequence of dashboards with a short caption on each point.

## Suggested Story Sequence

**1. Which categories dominate reported sales?** Start with sales by category. Two-Wheeler Scooter leads at 85,031,983; Electric Bus is lowest at 5,323,646.

**2. Which manufacturers lead?** Use the top-10 manufacturer ranking. SurgeWorks leads this view at 4,883,639 annual sales units.

**3. What battery technologies appear most often?** The battery mix is based on record counts: NMC 33,836 and LFP 32,101. Do not describe it as sales market share.

**4. How does range vary by vehicle type?** Luxury Sedan averages about 549 km and Two-Wheeler Scooter about 105 km, showing different use cases.

**5. Where are the manufacturers located?** Use the country map to show the dataset's geographic distribution and clearly state whether mark size represents count or annual sales.

**6. What do customer ratings say?** Ratings are close across categories; Crossover averages about 4.10. The small spread means this is not a strong differentiator by itself.

**7. How do sales vary by model year?** 2021 is the highest year (~88.09M) and 2025 the lowest (~82.55M) in the provided data.

**8. Is battery capacity associated with range?** Use the scatter plot to inspect the association and outliers; avoid claiming causation from this chart alone.

**9. Which categories show higher reported $CO_2$ savings?** Electric Bus (~9.05 tons/year), Pickup Truck (~9.01), and Electric Truck (~8.96) lead the average reported measure. Treat it as a dataset metric, not independently validated impact.

# Activity 2: Publish Story on Tableau Public

Story public URL: [PASTE A PUBLIC TABLEAU STORY URL HERE IF YOU CREATE A STORY. A dashboard URL alone is not a story URL.]

*The uploaded evidence confirms that a dashboard was published, but no public URL or Tableau Story link was provided in these files. Add the actual URL after testing it.*
