Dashboard Design

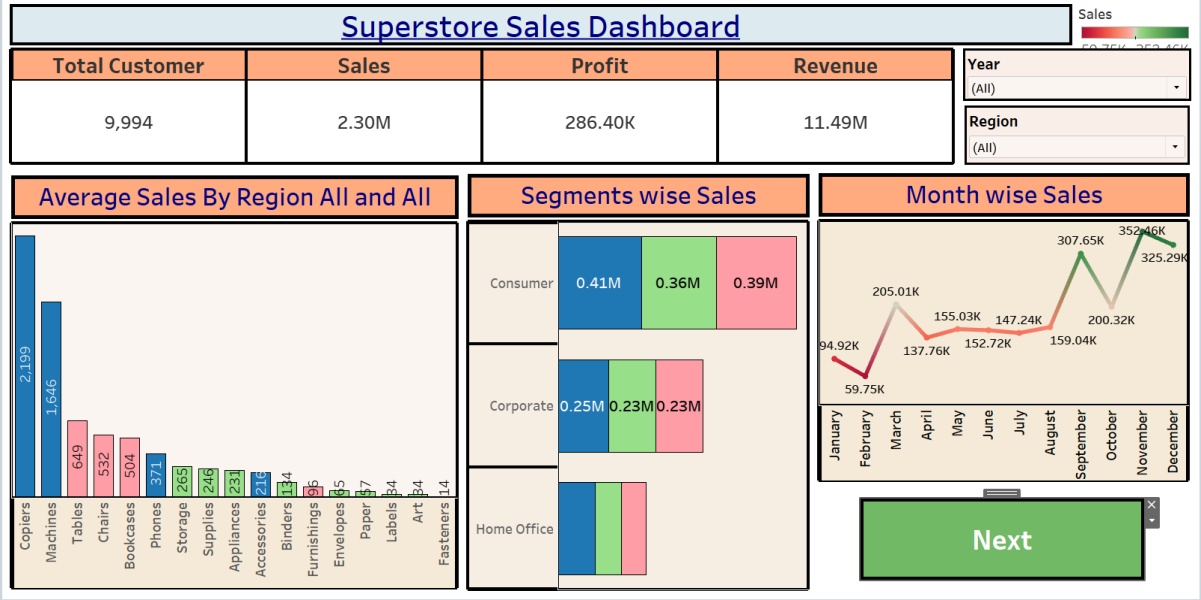

Date	29 October 2026
Team ID	Not provided — confirm from MySkillWallet/college
Project Name	EV Market Intelligence Dashboard
Maximum Marks	5 Marks

Creating an effective dashboard involves thoughtful design to ensure that the presented information is clear, relevant, and easily understandable for the intended audience. Here are some key principles and best practices for dashboard design

Activity 1: Interactive and visually appealing dashboards

Creating interactive and visually appealing dashboards involves a combination of thoughtful design, effective use of visual elements, and the incorporation of interactive features. Here are some tips to help you design dashboards that are both visually appealing and engaging for users so take care of below points

- Clear and Intuitive Layout
- Use Appropriate Visualizations
- Colour and Theming
- Interactive Filters and Slicers
- Drill-Down Capabilities
- Responsive Design
- Custom Visuals and Icons
- Use of Infographics

Note: Highlight the major outcomes in form of bullet points

Sample:

Here are five potential outcomes from the dashboard image provided:

- **Customer Count and Sales Overview**:The dashboard reports a total of 9,994 customers, with cumulative sales of 2.30M, a profit of 286.40K, and revenue of 11.49M. These figures highlight the overall scale and profitability of the store's operations.
- **Highest Sales**: Copiers and Machines are the top-selling products, with sales values of 2.199M and 1.646M, respectively. This suggests strong demand or high price points for these products.
- **Peak Month**: December has the highest monthly sales at 352.46K, likely due to holiday shopping.
- **Seasonal Sales Growth**:The monthly sales chart shows growth in specific months, such as March, September, October, and December, likely influenced by seasonal factors and sales events.
- **Sales Distribution Across Segments**: The **Consumer segment** leads with 0.41M in sales, followed by Corporate at 0.25M, and Home Office at the lowest

Activity 2

Publish Dashboard on Tableau Public and Paste the Dashboard Public link below:

US&publish=yes&:sid=&:redirect=auth&:display_count=n&:origin=viz_share_link

Dashboard Implementation: EV Market Intelligence Dashboard

Built in Tableau Public from ev_market_test.csv (100,000 records). The dashboard combines nine worksheets into a single view. Use a tiled layout and a fixed desktop dashboard size; set each worksheet to Fit → Entire View or Fit Width as appropriate, then check that legends and labels do not overlap.

Design Decisions

• Clear layout: place category sales and top manufacturers in the first row; battery mix and driving-range views next; use the country map and customer ratings for geographic/customer context; finish with model-year trend, capacity-vs-range scatter, and CO_2 savings.

• Appropriate visualizations: sorted horizontal bars for rankings, pie for battery-type record mix, map for country distribution, line chart for model-year trend, and scatter plot for battery capacity vs. range.

• Colour and theming: use a consistent palette; keep battery-type colors consistent across the pie and scatter plot. Avoid using many unrelated colors for ranking charts.

• Filters and interactivity: add only useful filters such as category, battery type, model year, and manufacturing country if the dashboard remains readable. Apply filters to relevant worksheets only.

• Responsive layout: test at the intended presentation size and in Tableau Public's view mode. Avoid floating objects unless there is a specific reason; floating containers commonly cause overlap.

• Labels/tooltips: keep labels on ranking charts where they fit; put secondary details in tooltips. Use clear units (sales units, km, kWh, rating, tons/year).

Major Outcomes

• **Category sales concentration:** Two-Wheeler Scooter has the largest total annual sales units (85,031,983), followed by Sedan (78,308,119) and Compact SUV (76,124,966). Electric Bus is the lowest category total (5,323,646).

• **Leading manufacturers:** SurgeWorks leads the displayed top-10 manufacturers at 4,883,639 annual sales units; CurrentMobility follows at 4,779,221.

• **Battery technology mix:** NMC is the most common battery type (33,836 records), with LFP second (32,101). This chart represents record counts, not market share by sales.

• **Driving range differences:** Luxury Sedan has the highest average range (~549 km), followed by Luxury SUV (~525 km). Two-Wheeler Scooter averages ~105 km.

• **Customer ratings are close:** Category averages are tightly grouped; Crossover is highest at ~4.10 and Electric Truck lowest at ~4.07. Differences are small and should not be overstated.

• **Sales trend by model year:** 2021 has the highest annual sales total (~88.09M); 2025 is lowest (~82.55M) in the provided dataset.

• **Battery capacity and range:** The scatter plot allows users to inspect the relationship and outliers between battery capacity and range, colored by battery type. It is exploratory, not proof of causation.

• **Sustainability metric:** Average reported CO_2 savings are highest for Electric Bus (~9.05 tons/year), Pickup Truck (~9.01), and Electric Truck (~8.96). Interpret these as dataset-reported values, not independently verified real-world impacts.

• **Geographic distribution:** The manufacturing-country map shows the countries represented in the file. Its meaning depends on whether mark size uses record count or summed annual sales; state the measure in the legend/title.

Activity 2: Tableau Public Link

Dashboard URL: [PASTE THE PUBLIC VIEW URL HERE — the published link was not included with the template upload.]

Before submission: open the public link in a signed-out/incognito window, verify that the whole dashboard is visible without scrolling where possible, and capture one full-dashboard screenshot.
