Project Development Phase
Performance Test

Date	29 October 2026
Team ID	Not provided — replace with actual MySkillWallet Team ID
Project Name	EV Market Intelligence Dashboard
Maximum Marks	As specified by course template

Project Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	Source: ev_market_test.csv. Tableau Public data source contains 100,000 records and 37 fields. File size: 23,238,435 bytes (22.16 MiB). Attach a screenshot of the data source and/or status bar confirming record count.
2.	Data Preprocessing	Source-level checks: 9,511 null cells across 5 columns; 0 full-row duplicates; 0 duplicate vehicle_id values. No data rows were removed in this report. Tableau AVG aggregations ignore null measure values; do not replace missing values with zero without a business reason.
3.	Utilization of Filters	Use only filters that are actually present in the published workbook. Relevant candidates: vehicle category, battery type, model year, manufacturing country, and Top 10 manufacturer filter. For each filter, verify that only intended worksheets update. No measured filter response times were supplied, so no performance timing is claimed.
4.	Calculation fields Used	Primary aggregations: SUM(Annual Sales Units), COUNT(Vehicle Id), AVG(Range Km), AVG(Customer Rating), AVG(CO2 Saved Tons Per Year). Model Year and Battery Capacity Kwh are used as axes in the trend and scatter views. Top 10 manufacturer ranking uses a Top N filter. These are primarily Tableau aggregations, not necessarily custom calculated fields.
5.	Dashboard design	9 visualisations/worksheets: sales by category; top 10 EV manufacturers; battery technology mix; driving range by category; manufacturing country map; customer satisfaction; sales by model year; battery

		capacity vs. range; sustainability impact. Attach the final dashboard screenshot and verify no overlap, clipped labels, hidden legends, or unintended scrolling.
6.	Story Design	A Tableau Story has not been confirmed from the provided evidence. Current dashboard contains 9 visualisations. If a Story is created, use a sequence from category sales → manufacturers → battery mix → range → geography → ratings → model-year trend → capacity/range → CO_2 savings. Until published, record Story URL as pending and do not claim a published story.

Final evidence still to attach: actual Team ID, full-dashboard screenshot, and the verified Tableau Public URL. If no Tableau Story was created, leave the Story URL pending rather than reusing the dashboard URL.
