Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to helps teams better understand their users.
Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Completed Empathy Map — Primary Persona: Emily Johnson

Context: Emily Johnson is the EV Market Strategy Director described in the project brief. The entries below are derived from the supplied scenario, not from interviews or measured user research.

Empathy Map Area	Project-specific insights
SAYS	Needs an executive-level view of annual sales by vehicle category, manufacturer performance, customer satisfaction, battery adoption, and driving range.
THINKS	Which categories and manufacturers are performing best? Which battery technologies and segments deserve investment?
DOES	Reviews sales and product data across categories and regions; compares manufacturers, battery technologies, driving range, and customer ratings; uses findings for portfolio planning.
FEELS	Needs confidence that strategic decisions are based on clear, comparable evidence rather than scattered metrics or isolated charts.
PAINS	Market data is spread across sales, vehicle specifications, manufacturer, geography, battery, and rating measures; comparing segments manually is time-consuming.
GAINS	An interactive dashboard with consistent KPIs, category/manufacturer comparisons, battery mix, range analysis, geography, satisfaction, and sustainability measures.

Validation note: This is a scenario-based empathy map. Validate the assumptions with actual stakeholder interviews if research evidence is required.
